

Agriculture Energy Alliance

Representing agriculture as a producer and consumer of energy

June 9, 2005

The Honorable Charles Grassley
United States Senate
135 Hart Senate Office Building
Washington, D.C. 20510

The Honorable Max Baucus
United States Senate
511 Hart Senate Office Building
Washington, D.C. 20510

Re: Incentives for Industrial Gasification Technologies

Dear Senators Grassley and Baucus:

As the Senate continues to finalize comprehensive energy legislation, the Agriculture Energy Alliance encourages the Senate Finance Committee to provide tax incentives to promote industrial gasification technologies.

The Agriculture Energy Alliance represents a broad-based coalition of growers and agribusinesses that faces a looming crisis because of public policies that create demand for natural gas while restricting access to supply sources. The farm sector depends on significant use of natural gas for food processing, irrigation, crop drying, heating farm buildings and homes, crop protection chemicals, and nitrogen fertilizer production.

The Agriculture Energy Alliance encourages you to advance federal policies to facilitate the efficient development and use of all our critical domestic supply resources. Provisions for establishing an industrial coal gasification strategy and for creating tax incentives for expanded cogeneration projects should help reduce demand for natural gas.

We encourage the full Senate to pass comprehensive energy legislation that includes provisions to increase supply and decrease demand for natural gas and, specifically, policies that facilitate development of clean coal technologies. A critical component is wider government participation in innovative technology that allows manufacturers to produce gas from coal, petroleum coke, biomass, and other abundant domestic energy sources. The Agriculture Energy Alliance urges the Senate to pass an energy bill that includes loan guarantees and grants—particularly helpful incentives for nitrogen fertilizer producers—to implement capital-intensive industrial gasification projects.

The agricultural community has become much more efficient in its use of energy resources. Since 1980, U.S. farmers have increased nitrogen use efficiency by 35 percent while boosting corn yields by 40 percent. We can produce an abundant, affordable, and healthy

food supply, but we need Congress to produce the kind of policies that enable us to utilize the resources needed to produce that supply.

The Agriculture Energy Alliance urges Congress to act expeditiously to promote the development of domestic energy resources so important to a competitive agricultural sector. We urge the Senate to pass a comprehensive energy bill that provides an enhanced role for development of all energy resources for a more diverse portfolio and adequate domestic supplies of natural gas. We stand ready to work with you on these extremely important policies that are critical to U.S. farmers, agribusiness and consumers.

Respectfully,
