Re: Increasing Natural Gas Production

Dear Senators:

On behalf of the 108 members of the Agriculture Energy Alliance (AEA), thank you for working together on the bi-partisan energy summit. AEA is particularly encouraged by your willingness to address energy supply through increased domestic production.

Our business is to grow abundant food and fiber for America and people around the world. Experts say that food production will need to double in the next 20 years to meet rising global demand. But today, tight natural gas supplies have driven U.S. farm inputs and energy prices to all time highs, increasing farm production costs. The U.S. farm sector is being weakened by constraints on onshore and offshore natural gas development, even as global demand for food is growing every year. By wisely developing and utilizing our own national resources, Congress can help ensure that farming remains an economically viable occupation.

Increased domestic natural gas production is a vote for food security. The farm sector depends on significant amounts of natural gas for food processing, irrigation, crop drying, heating farm buildings and homes and the production of crop protection chemicals and fertilizer.

Again, we greatly appreciate your leadership to allow for additional energy production in the United States. Increased energy supply is critical to maintaining a competitive agricultural sector.

Sincerely,

Members of the Agriculture Energy Alliance
